João Vítor Bianchi Teló

Front End Developer

Novo Hamburgo, RS, Brazil | joaovtelo@gmail.com

linkedin.com/in/joaotelo | github.com/Moharu

Profile

React and TypeScript developer with a full-stack JavaScript background and experience delivering web applications with international remote teams. Builds reusable interfaces, integrates APIs, and writes automated tests for components and application logic. Returning after a family-caregiving career break; available immediately for remote roles or hybrid opportunities near Novo Hamburgo. Fluent in English.

Technical Skills

Front end: React, TypeScript, JavaScript, responsive interfaces, Storybook
Testing: Jest, Playwright, unit and regression testing, API testing, Postman
Backend and delivery: Node.js, Express, MySQL, Docker, AWS, GitHub Actions
Additional experience: React Native, Elasticsearch, Couchbase, PHP

Professional Experience

X-Team | Full Stack JavaScript Developer

July 2019 - August 2022 | Remote

Contributed primarily to front-end development across fitness streaming, vehicle leasing, and internal developer platforms with international teams working in English.

- Translated Figma designs into reusable React and TypeScript components and responsive pages, integrating APIs and handling form validation, loading states, and errors.
- Developed interactive UI components for viewer participation during live workout streams and contributed to complex customer identity-verification flows.
- Wrote Jest tests for components and application logic using mocked API responses and simulated user input; added regression tests alongside QA-reported bug fixes.
- Contributed to internal work-reporting, billing, and rewards tools using shared components documented in Storybook; regularly reviewed pull requests.

DarkShine | Full Stack Developer

April 2018 - June 2019

Sole developer for an internal union dues billing platform serving billing operations for hundreds of companies, working from a product owner’s requirements and acceptance criteria.

- Built a React dashboard and Node.js/Express API for billing records, payment tracking, and filtered data exports.
- Implemented CSV imports and integrated Iugu to generate Brazilian payment slips (boletos), email contacts, and synchronize payment status.
- Deployed the API, database, website, and scheduled services to AWS; used Docker in the application stack.

Earlier Experience

Versul Tecnologia de Acesso Inteligente | Full Stack Developer

January 2015 - April 2018

- Helped extract payments from a PHP parking platform into a Node.js service using MySQL; documented and tested APIs with Postman.
- Used Couchbase and Elasticsearch for payment-log storage and analysis supporting client dashboards.
- Built React administration interfaces for payment records and logs, including scheduled CSV exports.
- Contributed to technology selection and a React Native location-based recommendation app.

OnePercent.IO | Partner and Ethereum Developer

November 2017 - October 2019 | Part-time alongside full-time roles

- Tested smart contracts on local Ethereum networks and explored Web3 wallet integration.
- Helped build a React rental-marketplace prototype using Ethereum smart contracts.

Career Break | Family Caregiving and Personal Time

September 2022 - August 2026

Took time away for family caregiving and personal wellbeing. Available immediately; resumed personal development projects in October 2026.

Selected Projects

Playwright Test Automation Portfolio

October 2026 | github.com/Moharu/practice-playwright

- Built Playwright and TypeScript API checks, UI smoke tests, defect regressions, and boundary-value checks against a demo e-commerce application.
- Documented test cases and exploratory findings; configured GitHub Actions to start the application before running tests.

Gameplay Video Review Tool | React and TypeScript MVP

October 2026 | ffxiv-pull-review.vercel.app | github.com/Moharu/ffxiv-pull-review

Delivered a video-review MVP on Vercel with timestamped feedback, inline editing, category filters, and local persistence. Used AI-assisted development; defined workflows, contributed code and tests, and verified behavior. Includes Vitest/React Testing Library tests and GitHub Actions checks.

Education and Award

Technical Diploma in Electronics | Fundação Liberato Salzano Vieira da Cunha
2011 - 2014

MOSTRATEC 2014: second place in Computer Science for SANDEV, a navigation aid for people with visual impairments.

Languages

Portuguese: native. English: full professional proficiency; used throughout X-Team employment.
