João Vítor Bianchi Teló

Front-End Developer | React & TypeScript

Novo Hamburgo, RS, Brazil | joaovtelo@gmail.com
Portfolio | LinkedIn | GitHub

PROFILE

Frontend developer with 7+ years of professional software development experience and a full-stack JavaScript background. Builds reusable React/TypeScript interfaces, integrates REST APIs, and tests components and application logic. Fluent in English, with three years of daily collaboration in international remote teams.

TECHNICAL SKILLS

Front end: React, TypeScript, JavaScript, Next.js (routing), HTML, CSS/Sass, Redux/Redux Toolkit, Context API, Material UI, Bootstrap and Storybook.
Professional testing: Jest, unit and regression tests, API mocking and Postman.
Backend and delivery: Node.js, Express, MySQL, Docker and AWS.
Recent personal-project tools: Vitest, React Testing Library, Playwright, GitHub Actions, Vite and Vercel.
Additional experience: React Native, PHP, Couchbase and Elasticsearch.

PROFESSIONAL EXPERIENCE

X-Team | Full Stack JavaScript Developer

July 2019 - August 2022 | Remote, international teams

- Developed features and maintained large applications, primarily with React and TypeScript. Used Next.js across all X-Team projects, including routing, and Redux in one project.
- Translated Figma designs into reusable components and responsive interfaces, working with shared internal libraries and Storybook.
- Integrated APIs and implemented complex forms, validation, loading states and error handling.
- Developed React UI for live audience emoji reactions during fitness streams using WebSocket events; also contributed to customer identity-verification interfaces.
- Wrote Jest tests for components and application logic with mocked API responses and simulated interactions; added regression tests alongside fixes for QA-reported bugs.
- Reviewed pull requests and participated in requirements clarification, acceptance-criteria discussions, estimation and sprint planning. Worked entirely in English.

DarkShine | Full Stack Developer

April 2018 - June 2019

- Built and deployed an internal union-dues billing platform as the sole developer, working with a product owner on requirements and acceptance criteria. Supported billing operations for hundreds of companies.
- Built a React dashboard and Node.js/Express API for billing records, CSV imports and filtered exports. Integrated Iugu for boleto issuance, email delivery and payment-status synchronization.
- Used Redux for authentication; kept most other state at component or screen level.
- Deployed the API, database, website and scheduled services to AWS; used Docker.

SELECTED PERSONAL PROJECTS

Gameplay Video Review Tool | Delivered MVP

October 2026 | Live demo | Source and development journal

- Delivered a React, TypeScript and Vite app for reviewing gameplay recordings, with timestamped feedback, video seeking, inline editing, category filtering, importance levels and local persistence.
- Co-developed with substantial AI assistance: defined workflows, contributed code and tests, critically reviewed suggestions and manually verified the original MVP in the browser and on a phone.
- Included recording reconnection, an isolated hosted demo, Vitest/React Testing Library tests and GitHub Actions checks.

Support Ticket Dashboard | Completed practice exercise

October 2026 | GitHub repository

- Built a React, TypeScript, Next.js and Redux Toolkit practice dashboard using a mock asynchronous API, with combined status/priority/title filters, optimistic updates and per-ticket error handling and rollback.
- Co-developed the initial implementation and tests with AI assistance; independently extended priority filtering and test coverage. Vitest tests cover Redux logic and UI interactions, including combined filters.

EARLIER EXPERIENCE

Versul Tecnologia de Acesso Inteligente | Full Stack Developer

January 2015 - April 2018

- Built React administration interfaces for payment records, logs and scheduled CSV exports; used Redux, Material UI and Bootstrap in Versul projects.
- Helped extract payment functionality from a PHP parking platform into a Node.js/MySQL service. Documented and tested APIs with Postman; used Couchbase and Elasticsearch for payment-log storage and analysis.
- Contributed to technology selection and a React Native app with geolocation and notifications, published on Google Play and the App Store (no longer available).

OnePercent.IO | Partner and Ethereum Developer

November 2017 - October 2019 | Part-time alongside regular employment

- Developed and tested experimental smart contracts on local Ethereum networks, explored Web3 wallet integration and contributed to a React rental-marketplace prototype.

CAREER BREAK

September 2022 - August 2026 | Family caregiving and personal time. Resumed hands-on personal development projects in October 2026.

EDUCATION AND AWARD

Technical Diploma in Electronics | Fundação Liberato Salzano Vieira da Cunha | 2011 - 2014
MOSTRATEC 2014: second place in Computer Science for SANDEV, a navigation assistance system for people with visual impairments.

LANGUAGES

Portuguese: native. English: fluent.
